

# Machine Learning For Kids :: Teachers' notes

<b>Worksheet</b>	<b>Smart Classroom</b>
<b>Activity</b>	Create a smart assistant in Scratch that lets you control virtual devices.
<b>Objective</b>	<b>Teach a computer to recognise the meaning of your commands</b> <ul style="list-style-type: none"> <li>How computers can be trained to recognise the intent behind writing.</li> <li>Confidence thresholds indicate when the machine cannot recognise the meaning.</li> <li>How virtual assistants (e.g. Apple Siri, Amazon Alexa, Google Home) work.</li> </ul>
<b>Difficulty level</b>	Beginner
<b>Time estimate</b>	1 hour (for full version of the project, where students try making it without machine learning first) or 45 minutes (if students only make a machine learning project)
<b>Summary</b>	Students will train a machine learning model to recognise the meaning of instructions. They will use this in Scratch to make a virtual assistant like Alexa that will respond to commands.
<b>Topics</b>	digital assistants, confidence thresholds, supervised learning

## Setup

Each student will need:

<b>Print-outs</b>	Project worksheet (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> )  Blocks in Scratch scripts are colour-coded, so printing in colour will make it easier for students.  There are <b>two versions of the worksheet</b> – one that assumes students will try making the assistant without machine learning first and compare, the other assumes students will only use machine learning.
<b>Files</b>	Starter file (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> )
<b>Access</b>	Username and password for machinelearningforkids.co.uk

Class account will need:

<b>API keys</b>	<b>Watson Conversation</b> 1 workspace per student  One "Lite" API key is free but can only be used to create 5 workspaces One "Standard" API key can be used to create 20 workspaces  more detail at: <a href="https://github.com/daledane/ml-for-kids/raw/master/doc/machinelearningforkids-apikeys.pdf">https://github.com/daledane/ml-for-kids/raw/master/doc/machinelearningforkids-apikeys.pdf</a>
-----------------	--

## Help

<b>Potential issues</b>	<ul style="list-style-type: none"> <li>No known issues</li> </ul> General troubleshooting and help at <a href="https://machinelearningforkids.co.uk/help">https://machinelearningforkids.co.uk/help</a>
-------------------------	---

# Machine Learning For Kids :: Teachers' notes

<b>Worksheet</b>	<b>Make Me Happy</b>
<b>Activity</b>	Create a character in Scratch that smiles if you say nice things to it and cries if you say mean things to it.
<b>Objective</b>	<b>Teach a computer to recognise compliments and insults</b> <ul style="list-style-type: none"> <li>How computers can be trained to recognise emotional tone</li> <li>How supervised learning builds systems that can deal with unexpected input</li> </ul>
<b>Difficulty level</b>	Beginner
<b>Time estimate</b>	45 minutes
<b>Summary</b>	Students will train a machine learning model to recognise compliments and insults by typing examples of kind statements and mean statements. They will use this in Scratch to make a character that reacts to messages based on sentiment.
<b>Topics</b>	sentiment analysis, supervised learning

## Setup

Each student will need:

<b>Print-outs</b>	Project worksheet (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> )  Blocks in Scratch scripts are colour-coded, so printing in colour will make it easier for students.
<b>Access</b>	Username and password for machinelearningforkids.co.uk

Class account will need:

<b>API keys</b>	<b>Watson Conversation</b> 1 workspace per student  One "Lite" API key is free but can only be used to create 5 workspaces One "Standard" API key can be used to create 20 workspaces  more detail at: <a href="https://github.com/daledane/ml-for-kids/raw/master/doc/machinelearningforkids-apikeys.pdf">https://github.com/daledane/ml-for-kids/raw/master/doc/machinelearningforkids-apikeys.pdf</a>
-----------------	--

## Help

<b>Potential issues</b>	<ul style="list-style-type: none"> <li>Younger students may get carried away when writing insults to train the machine learning model. It may be helpful to set boundaries for what language is appropriate.</li> <li>Time management is important for this project. Students often lose track of time drawing their face and don't leave enough time for training or coding.</li> </ul> <p>General troubleshooting and help at <a href="https://machinelearningforkids.co.uk/help">https://machinelearningforkids.co.uk/help</a></p>
-------------------------	---

# Machine Learning For Kids :: Teachers' notes

<b>Worksheet</b>	<b>Snap</b>
<b>Activity</b>	Make a card game in Scratch that learns to recognise pictures of your card.
<b>Objective</b>	<b>Teach a computer to recognise what icons look like</b> <ul style="list-style-type: none"> <li>Learn how computers can be trained to recognise pictures</li> </ul>
<b>Difficulty level</b>	Beginner
<b>Time estimate</b>	1.5 hours (for full version of the project, where the students make their own cards) or 45 minutes (if students are provided with pre-made cards)
<b>Summary</b>	Students will make cards with different coloured icons. They will train a machine learning model to recognise what the icons look like by taking pictures of them with a computer webcam. They will use this in Scratch to make a Snap game where the computer recognises if it chooses a matching card.
<b>Topics</b>	image classification, supervised learning

## Setup

Each student will need:

<b>Print-outs</b>	Project worksheet (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> )  Blocks in Scratch scripts are colour-coded, so printing in colour will make it easier for students.  There are <b>two versions of the worksheet</b> – depending on whether students will make their own cards, or if you will give them pre-made cards.
<b>Files</b>	Starter file (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> )
<b>Resources</b>	Paper, scissors, felt pens (for full project, where the students make their own cards) or Pre-made cards (download and print the “Additional project resources”)
<b>Technology</b>	Web-cam
<b>Access</b>	Username and password for machinelearningforkids.co.uk

Class account will need:

<b>API keys</b>	<b>Watson Visual Recognition</b> 1 custom model per student  One “Lite” API key is free but can only be used to create 1 custom model One “Standard” API key can be used to create multiple custom models  more detail at: <a href="https://github.com/daledane/ml-for-kids/raw/master/doc/machinelearningforkids-apikeys.pdf">https://github.com/daledane/ml-for-kids/raw/master/doc/machinelearningforkids-apikeys.pdf</a>
-----------------	--

## Help

<b>Potential issues</b>	<ul style="list-style-type: none"> <li>Students will be taking photos and uploading them to a secure site, where they are kept until their photo or project is deleted. As long as only cards are visible in photos they take, then students will not be identifiable from this. If this raises concerns it may be sensible to obtain parental permission.</li> </ul> <p>General troubleshooting and help at <a href="https://machinelearningforkids.co.uk/help">https://machinelearningforkids.co.uk/help</a></p>
-------------------------	--

# Machine Learning For Kids :: Teachers' notes

<b>Worksheet</b>	<b>Mailman Max</b>
<b>Activity</b>	Make a postal sorting office in Scratch that can recognise handwritten postcodes on envelopes.
<b>Objective</b>	<b>Teach a computer to recognise handwriting</b> <ul style="list-style-type: none"> <li>Learn how computers can be trained to recognise handwriting</li> <li>Learn how “optical character recognition” is used to automate tasks like recognising postcodes on letters</li> </ul>
<b>Difficulty level</b>	Beginner
<b>Time estimate</b>	1 hour
<b>Summary</b>	Students will draw letters on the screen using an on-screen canvas. This will train a machine learning model to recognise some handwriting. They will use this in Scratch to make a project that can automatically sort letters based on the postcodes they write on them.
<b>Topics</b>	optical character recognition, handwriting recognition, image classification, supervised learning

## Setup

Each student will need:

<b>Print-outs</b>	Project worksheet (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> )  Blocks in Scratch scripts are colour-coded, so printing in colour will make it easier for students.
<b>Files</b>	mailman-max.sbx (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> )
<b>Access</b>	Username and password for machinelearningforkids.co.uk

Class account will need:

<b>API keys</b>	<b>Watson Visual Recognition</b> 1 custom model per student  One “Lite” API key is free but can only be used to create 1 custom model One “Standard” API key can be used to create multiple custom models  more detail at: <a href="https://github.com/daledane/ml-for-kids/raw/master/doc/machinelearningforkids-apikeys.pdf">https://github.com/daledane/ml-for-kids/raw/master/doc/machinelearningforkids-apikeys.pdf</a>
-----------------	--

## Help

<b>Potential issues</b>	<ul style="list-style-type: none"> <li>Some children may struggle with the coordination needed to write letters on the screen by dragging the mouse pointer on the canvas. Reassure them that it doesn't need to be perfect, and that training the computer to recognise messy handwriting with examples of messy handwriting is fine!</li> </ul> <p>General troubleshooting and help at <a href="https://machinelearningforkids.co.uk/help">https://machinelearningforkids.co.uk/help</a></p>
-------------------------	--

# Machine Learning For Kids :: Teachers' notes

<b>Worksheet</b>	<b>Car or Cup</b>
<b>Activity</b>	Train the computer to be able to sort photos into groups.
<b>Objective</b>	<b>Teach a computer to recognise pictures of objects</b> <ul style="list-style-type: none"> <li>How computers can be trained to recognise pictures.</li> <li>The important of variety in training machine learning systems.</li> </ul>
<b>Difficulty level</b>	Beginner
<b>Time estimate</b>	45 minutes
<b>Summary</b>	Students will train a machine learning model to recognise pictures of cars or cups. They will use this to make a project in Scratch that sorts a pile of photos into two groups.
<b>Topics</b>	image classification, supervised learning

## Setup

Each student will need:

<b>Print-outs</b>	Project worksheet (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> )  Blocks in Scratch scripts are colour-coded, so printing in colour will make it easier for students.
<b>Files</b>	car-or-cup.sbx (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> )
<b>Access</b>	Access to an image search site (e.g. Google Images, Bing Images, etc.)
<b>Access</b>	Username and password for machinelearningforkids.co.uk

Class account will need:

<b>API keys</b>	<b>Watson Visual Recognition</b> 1 custom model per student  One "Lite" API key is free but can only be used to create 1 custom model One "Standard" API key can be used to create multiple custom models  more detail at: <a href="https://github.com/daledane/ml-for-kids/raw/master/doc/machinelearningforkids-apikeys.pdf">https://github.com/daledane/ml-for-kids/raw/master/doc/machinelearningforkids-apikeys.pdf</a>
-----------------	--

## Help

<b>Potential issues</b>	<ul style="list-style-type: none"> <li>Students will need Internet access to search for pictures of cars and cups to train the computer with. Depending on the age of the students, close supervision may be appropriate to ensure safe searching.</li> <li>The starter Scratch project includes a test set of images. Accuracy will be affected by how similar these are to images the students select to train with. For example, if students collect examples of only sports cars to train the computer to recognise cars, this may struggle to recognise non-sports cars. If this happens, encourage them to think about why it's getting things wrong, and how they could improve this by collecting a more varied set of photos to train the computer with.</li> </ul> <p>General troubleshooting and help at <a href="https://machinelearningforkids.co.uk/help">https://machinelearningforkids.co.uk/help</a></p>
-------------------------	---

# Machine Learning For Kids :: Teachers' notes

<b>Worksheet</b>	<b>Pac-Man</b>
<b>Activity</b>	Create a Pac-Man game in Scratch that learns how to avoid the ghost.
<b>Objective</b>	<b>Teach a computer to play a game</b> <ul style="list-style-type: none"> <li>How machines are taught to play games</li> <li>Decision tree learning as a way for computers to learn how to play games.</li> </ul>
<b>Difficulty level</b>	Intermediate It needs an understanding of 2D coordinates. The Scratch scripts are slightly complex.
<b>Time estimate</b>	1 hour
<b>Summary</b>	Students will train Pac-Man by playing the game in Scratch. The machine learning model will be trained based on the moves that they make while playing. They will use this model to get Pac-Man to play by itself.
<b>Topics</b>	AI in games, decision tree learning

## Setup

Each student will need:

<b>Print-outs</b>	Project worksheet (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> ) Blocks in Scratch scripts are colour-coded, so printing in colour will make it easier for students.
<b>Files</b>	pacman.sbx (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> )
<b>Access</b>	Username and password for machinelearningforkids.co.uk

Class account will need:

<b>API keys</b>	None
-----------------	------

## Help

<b>Potential issues</b>	<ul style="list-style-type: none"> <li>Time management is important for this project. Students often lose track of time while playing Pac-Man and don't leave enough time for training or coding. It may be helpful to time-box the sections (initial trying out of the game, training the model, testing the model) to keep the class on track.</li> <li>There is more than one way to avoid the ghost. For example, doing laps of the map. Or flipping back and forth swapping places with the ghost. Let students find their own preferred strategy (there is no "right" way) and see if the Pac-Man they train learns to adopt their strategy.</li> <li>Encourage students to keep their two Scratch projects separate – one for training Pac-Man, the other to use that training to let the computer play. That means if Pac-Man isn't very good, they can easily go back and add more training.</li> <li>It is important to close and re-open the Scratch browser window after each time a machine learning model is trained, otherwise Scratch will keep using previous moves.</li> </ul> <p>General troubleshooting and help at <a href="https://machinelearningforkids.co.uk/help">https://machinelearningforkids.co.uk/help</a></p>
-------------------------	---

# Machine Learning For Kids :: Teachers' notes

<b>Worksheet</b>	<b>Tourist Info</b>
<b>Activity</b>	Create a mobile app in Scratch that recommends tourist attractions based on people's interests.
<b>Objective</b>	<b>Teach a computer to make recommendations</b> <ul style="list-style-type: none"> <li>The impact of training bias on machine learning systems</li> <li>Ethical questions introduced by training bias in machine learning systems.</li> </ul>
<b>Difficulty level</b>	Intermediate It can involve a lot of typing. Although simple to implement, appreciating the objectives requires an understanding of the implications of machine learning so this is more effective as a follow-on to another project.
<b>Time estimate</b>	1 hour (for full version of the project, where the students make more of the Scratch project) or 45 minutes (if students use the shorter-version of the project with a more pre-made Scratch file)
<b>Summary</b>	Students will train a machine learning model to make recommendations to holiday-makers based on their descriptions of likes and interests. They will use this in Scratch to make a mobile app. They will then be guided to make this more biased, and to consider the impact of bias in AI.
<b>Topics</b>	training bias, recommendations, supervised learning

## Setup

Each student will need:

<b>Print-outs</b>	Project worksheet (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> )  Blocks in Scratch scripts are colour-coded, so printing in colour will make it easier for students.  There are <b>two versions of the worksheet</b> – depending on the amount of Scratch coding to do.
<b>Files</b>	Starter file (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> )
<b>Access</b>	Username and password for machinelearningforkids.co.uk

Class account will need:

<b>API keys</b>	<b>Watson Conversation</b> 1 workspace per student  One “Lite” API key is free but can only be used to create 5 workspaces One “Standard” API key can be used to create 20 workspaces  more detail at: <a href="https://github.com/dalelane/ml-for-kids/raw/master/doc/machinelearningforkids-apikeys.pdf">https://github.com/dalelane/ml-for-kids/raw/master/doc/machinelearningforkids-apikeys.pdf</a>
-----------------	--

## Help

<b>Potential issues</b>	<ul style="list-style-type: none"> <li>Students will type about 25 short sentences. For some younger children, this might not be achievable in a single lesson, so you may wish to allow extra time. Alternatively, it might be better to do this as a “whole class project” (create the project yourself and tick “whole class project”) so that the class only have to write 25 sentences between all of them.</li> </ul> <p>General troubleshooting and help at <a href="https://machinelearningforkids.co.uk/help">https://machinelearningforkids.co.uk/help</a></p>
-------------------------	--

# Machine Learning For Kids :: Teachers' notes

<b>Worksheet</b>	<b>Sorting Hat</b>
<b>Activity</b>	Create a Sorting Hat like in Harry Potter, that puts you in a school House based on what you say.
<b>Objective</b>	<b>Teach a computer to recognise use of language</b> <ul style="list-style-type: none"> <li>How computers can recognise patterns such as choice of words, phrasing and sentence construction</li> </ul>
<b>Difficulty level</b>	Intermediate It can involve a lot of typing.
<b>Time estimate</b>	1 – 2 hours (if students are training their own models, depending on how fast they can type) or 45 minutes (if students work together on a whole class project)
<b>Summary</b>	Students will collect quotes from Harry Potter characters, and sort these based on the school House that the character is in. These will be used to train a machine learning model to recognise the use of language from people in each house.
<b>Topics</b>	text classification, supervised learning, crowd sourcing

## Setup

Each student will need:

<b>Print-outs</b>	Project worksheet (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> )  Blocks in Scratch scripts are colour-coded, so printing in colour will make it easier for students.  There are <b>two versions of the worksheet</b> – one that assumes students will work individually, the other assumes students will work together as a whole class.
<b>Resources</b>	Access to Harry Potter books or access to websites with Harry Potter quotes
<b>Access</b>	Username and password for machinelearningforkids.co.uk

Class account will need:

<b>API keys</b>	<b>Watson Conversation</b> 1 workspace per student (if students are training their own models) or 1 workspace per class (if students work together on a whole class project)  One “Lite” API key is free but can only be used to create 5 workspaces One “Standard” API key can be used to create 20 workspaces  more detail at: <a href="https://github.com/dalelane/ml-for-kids/raw/master/doc/machinelearningforkids-apikeys.pdf">https://github.com/dalelane/ml-for-kids/raw/master/doc/machinelearningforkids-apikeys.pdf</a>
-----------------	--

## Help

<b>Potential issues</b>	<ul style="list-style-type: none"> <li>Approximately 40 sentences are needed for training (10 examples x 4 Houses). If students are each doing this individually, you should allow enough time for this much typing. Copying-and-pasting quotes from websites can be quicker.</li> <li>If students aren't happy drawing a Sorting Hat, they could find a photo to use</li> </ul> General troubleshooting and help at <a href="https://machinelearningforkids.co.uk/help">https://machinelearningforkids.co.uk/help</a>
-------------------------	--

# Machine Learning For Kids :: Teachers' notes

<b>Worksheet</b>	<b>Rock, Paper, Scissors</b>
<b>Activity</b>	Make a Rock, Paper, Scissors game in Scratch that learns to recognise hand shapes.
<b>Objective</b>	<b>Teach a computer to recognise shapes</b> <ul style="list-style-type: none"> <li>How computers can be trained to recognise pictures.</li> <li>The important of variety in training machine learning systems.</li> </ul>
<b>Difficulty level</b>	Intermediate Taking the training photos of your own hand needs coordination.
<b>Time estimate</b>	45 minutes
<b>Summary</b>	Students will train a machine learning model to recognise pictures of hand shapes. They will use this to make a project in Scratch that plays rock, paper, scissors.
<b>Topics</b>	image classification, supervised learning

## Setup

Each student will need:

<b>Print-outs</b>	Project worksheet (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> )  Blocks in Scratch scripts are colour-coded, so printing in colour will make it easier for students.
<b>Files</b>	rock-paper-scissors.sbx (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> )
<b>Technology</b>	Web-cam
<b>Access</b>	Username and password for machinelearningforkids.co.uk

Class account will need:

<b>API keys</b>	<b>Watson Visual Recognition</b> 1 custom model per student  One "Lite" API key is free but can only be used to create 1 custom model One "Standard" API key can be used to create multiple custom models  more detail at: <a href="https://github.com/daledane/ml-for-kids/raw/master/doc/machinelearningforkids-apikeys.pdf">https://github.com/daledane/ml-for-kids/raw/master/doc/machinelearningforkids-apikeys.pdf</a>
-----------------	--

## Help

<b>Potential issues</b>	<ul style="list-style-type: none"> <li>Students will be taking photos of their hands and uploading them to a secure site, where they are kept until their photo or project is deleted. As long as only their hands are visible in photos they take, then students are unlikely to be identifiable from this. If using laptops, angling the screen towards the ceiling helps with this. However, if the chance of photos accidentally including students raises concerns it may be sensible to obtain parental permission.</li> <li>Students often take a large number of very similar training photos. This is less likely to be accurate than photos of hands in a variety of positions and angles. It's helpful to highlight this and encourage students to think about why it is the case.</li> </ul> <p>General troubleshooting and help at <a href="https://machinelearningforkids.co.uk/help">https://machinelearningforkids.co.uk/help</a></p>
-------------------------	---

# Machine Learning For Kids :: Teachers' notes

<b>Worksheet</b>	<b>Judge a Book</b>
<b>Activity</b>	Make a game in Scratch to test whether it really is possible to judge a book by its cover.
<b>Objective</b>	<b>Teach a computer to recognise visual style</b> <ul style="list-style-type: none"> <li>How effectiveness of a machine learning system can be measured by comparing performance against humans.</li> </ul>
<b>Difficulty level</b>	Intermediate The Scratch script is slightly complex. The term "genres" may require explanation. The idea of measuring performance by comparing answers against those of another human can require some explaining.
<b>Time estimate</b>	1 hour
<b>Summary</b>	Students will use a library or book retailer website to collect photos of book covers, and use these to train a machine learning model to recognise the genre of a book, based on a picture of it's cover. They will use this to make a project in Scratch.
<b>Topics</b>	image classification, supervised learning

## Setup

Each student will need:

<b>Print-outs</b>	Project worksheet (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> )  Blocks in Scratch scripts are colour-coded, so printing in colour will make it easier for students.
<b>Files</b>	judge-a-book.sbx (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> )
<b>Access</b>	Access to a library or book retailer site (e.g. Amazon, etc.)
<b>Access</b>	Username and password for machinelearningforkids.co.uk

Class account will need:

<b>API keys</b>	<b>Watson Visual Recognition</b> 1 custom model per student  One "Lite" API key is free but can only be used to create 1 custom model One "Standard" API key can be used to create multiple custom models  more detail at: <a href="https://github.com/daledane/ml-for-kids/raw/master/doc/machinelearningforkids-apikeys.pdf">https://github.com/daledane/ml-for-kids/raw/master/doc/machinelearningforkids-apikeys.pdf</a>
-----------------	--

## Help

<b>Potential issues</b>	<ul style="list-style-type: none"> <li>Students will need Internet access to search for pictures of book covers to train the computer with. Depending on the age of the students, close supervision may be appropriate to ensure safe searching.</li> <li>Using a site that already sorts books by genre can help to make the training more efficient.</li> </ul> <p>General troubleshooting and help at <a href="https://machinelearningforkids.co.uk/help">https://machinelearningforkids.co.uk/help</a></p>
-------------------------	--

# Machine Learning For Kids :: Teachers' notes

<b>Worksheet</b>	<b>Noughts and Crosses</b>
<b>Activity</b>	Create a noughts and crosses game in Scratch that learns how to beat you.
<b>Objective</b>	<b>Teach a computer to play a game</b> <ul style="list-style-type: none"> <li>How machines have been taught to play games since the 1960's.</li> <li>Decision tree learning as a way for computers to learn how to play games.</li> </ul>
<b>Difficulty level</b>	Advanced The Scratch script is long and complex. Most of it is provided in a starter project file, but finding the right places to make changes needs care.
<b>Time estimate</b>	1 – 1.5 hours
<b>Summary</b>	Students will train the computer to play noughts and crosses by playing the game in Scratch. The machine learning model will be trained based on the moves that they make while playing.
<b>Topics</b>	decision tree learning, reinforcement learning, categorical data

## Setup

Each student will need:

<b>Print-outs</b>	Project worksheet (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> ) Blocks in Scratch scripts are colour-coded, so printing in colour will make it easier for students.
<b>Files</b>	noughts-and-crosses.sbx (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> )
<b>Access</b>	Username and password for machinelearningforkids.co.uk

Class account will need:

<b>API keys</b>	None
-----------------	------

## Help

<b>Potential issues</b>	<ul style="list-style-type: none"> <li>Time management is important for this project. Students often lose track of time while playing the game and don't leave enough time for training or coding. It may be helpful to time-box the sections (initial trying out of the game, training the model, testing the model) to keep the class on track.</li> <li>The most common bug in student Scratch scripts is to make the wrong choice in orange drop-down blocks (e.g. choosing "history nought top-right" instead of "history cross top-right"). Encourage students to copy carefully. Working in pairs can help avoid mistakes.</li> <li>It is important to close and re-open the Scratch browser window after each time a machine learning model is trained, otherwise Scratch will keep using previous moves.</li> </ul> <p>General troubleshooting and help at <a href="https://machinelearningforkids.co.uk/help">https://machinelearningforkids.co.uk/help</a></p>
-------------------------	---

# Machine Learning For Kids :: Teachers' notes

<b>Worksheet</b>	<b>Top Trumps</b>
<b>Activity</b>	Train a computer to be able to play the Top Trumps card game in Scratch.
<b>Objective</b>	<b>Teach a computer to play a game</b> <ul style="list-style-type: none"> <li>Collecting training is easier than manually labelling training data.</li> <li>Computers can learn to play games where the correct answer cannot be known, by predicting the likelihood of each outcome.</li> </ul>
<b>Difficulty level</b>	Advanced The Scratch script is long and complex. Most of it is provided in a starter project file, but finding the right places to make changes needs care.
<b>Time estimate</b>	1 – 2 hours
<b>Summary</b>	Students will train the computer to play Top Trumps by playing the game in Scratch. The machine learning model will be trained based on the choices that they make while playing.
<b>Topics</b>	decision tree learning, reinforcement learning, categorical data

## Setup

Each student will need:

<b>Print-outs</b>	Project worksheet (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> )  Blocks in Scratch scripts are colour-coded, so printing in colour will make it easier for students.

# Machine Learning For Kids :: Teachers' notes

<b>Worksheet</b>	<b>Headlines</b>
<b>Activity</b>	Train a computer to recognise headlines from national newspapers.
<b>Objective</b>	<b>Test the computer's ability to recognise use of language</b> <ul style="list-style-type: none"> <li>How computers can be taught to recognise the source of writing</li> <li>How machine learning systems are tested.</li> </ul>
<b>Difficulty level</b>	Advanced The Scratch script is long and complex. Most of it is provided in a starter project file, but finding the right places to make changes needs care. The concept of testing and accuracy can require some explanation.
<b>Time estimate</b>	1 – 2 hours
<b>Summary</b>	Students will collect examples of headlines from national newspapers. These will be used to train a machine learning model based on language in headlines. They will measure the accuracy of this model in a test framework in Scratch.
<b>Topics</b>	text classification, supervised learning, testing

## Setup

Each student will need:

<b>Print-outs</b>	Project worksheet (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> ) Blocks in Scratch scripts are colour-coded, so printing in colour will make it easier for students.
<b>Files</b>	headlines.sbx (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> )
<b>Access</b>	Username and password for machinelearningforkids.co.uk

Class account will need:

<b>API keys</b>	None
-----------------	------

## Help

<b>Potential issues</b>	<ul style="list-style-type: none"> <li>Some national newspapers use language in their headlines that may not be appropriate for younger children. You may want to tell your class which newspapers to choose if you have concerns.</li> <li>It is important to close and re-open the Scratch browser window after each time a machine learning model is trained, otherwise Scratch will keep using previous output.</li> </ul> <p>General troubleshooting and help at <a href="https://machinelearningforkids.co.uk/help">https://machinelearningforkids.co.uk/help</a></p>
