

If “File -> Load Project” and “File -> Save Project” doesn’t do anything in Safari, then it might be because you’re running Adobe Flash for machinelearningforkids.co.uk in “Safe Mode”.

Safe Mode prevents flash from reading or writing the files on your computer, which stops the File Save and Load dialogs from being able to open.

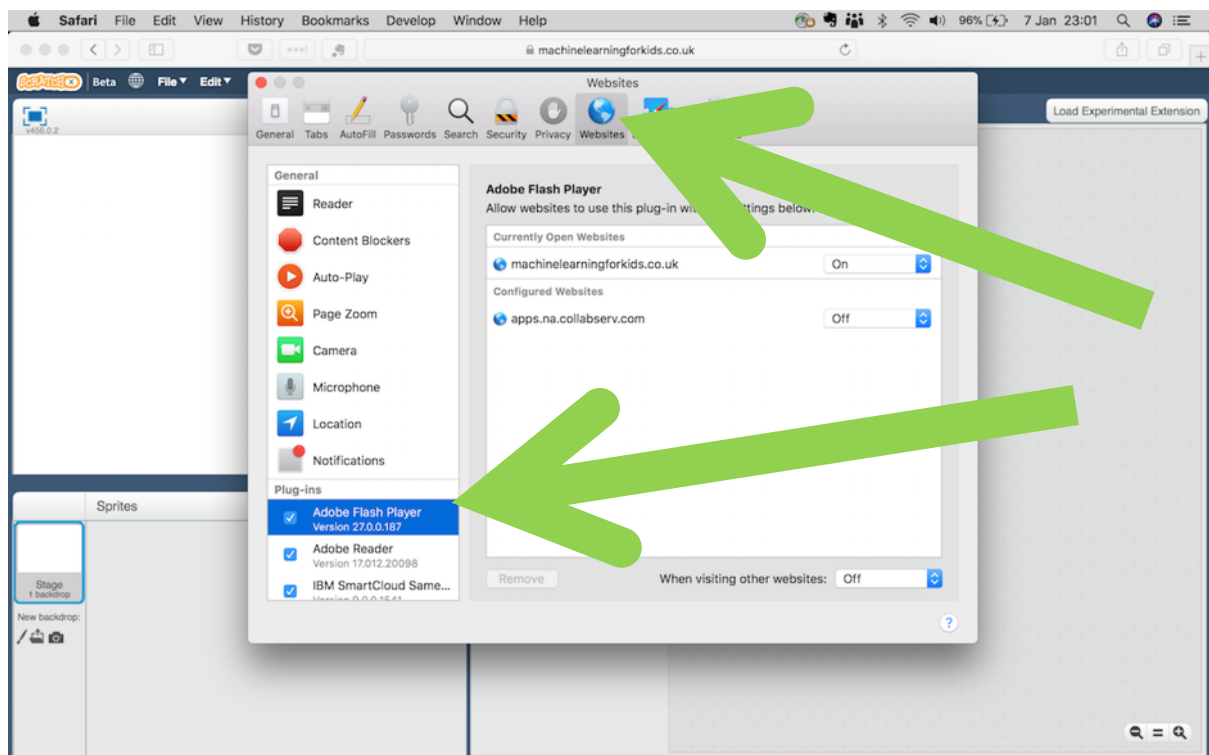

This Help doc explains how to turn this off just for this site, and get the Load/Save working again!

Step 1 – go to the Preferences dialog for Safari

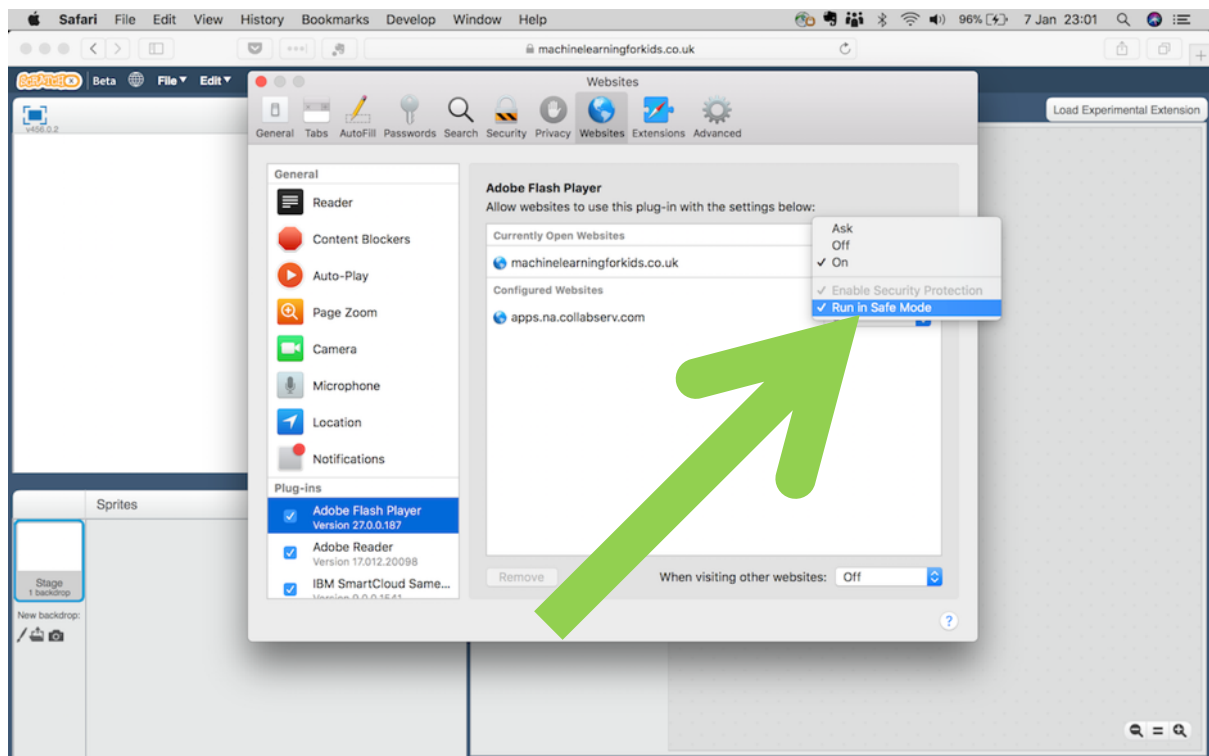

Step 2 – click on the Flash Player plugin in the Websites tab

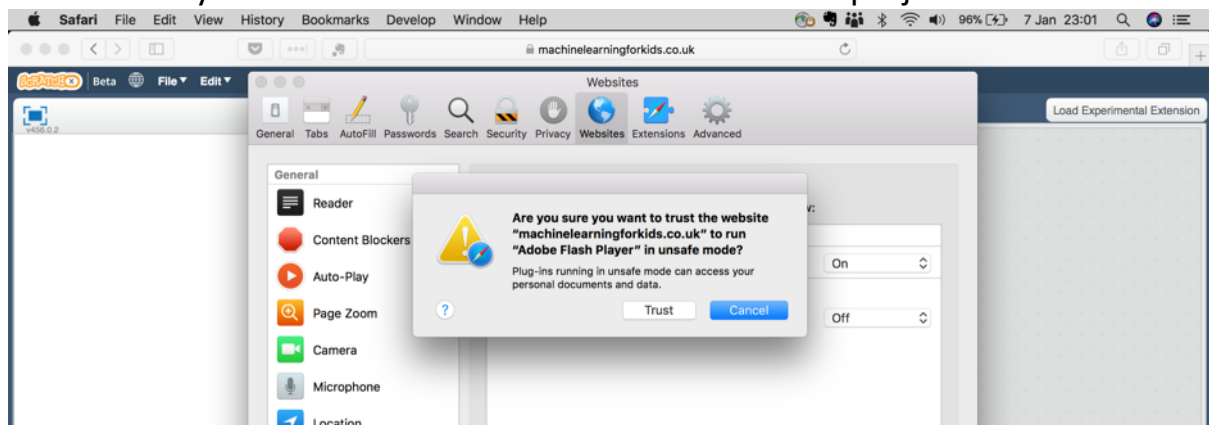

Step 3 – hold down the “alt” or “Option” key on your keyboard
Keep it held down while you do Step 4!

Step 4 – click on the drop-down list for “machinelearningforkids.co.uk”
If “Run in Safe Mode” is ticked, then this is why you can’t Load or Save projects in Scratch.

Step 5 – click on “Run in Safe Mode” to untick it
The warning tells you that this will let Scratch access files on your computer.
This is what you need to be able Load and Save Scratch projects.

All done!

Scratch should now be able to load and save projects again.
