Machine Learning For Kids :: Teachers' notes	
Worksheet	Mailman Max
Activity	Make a postal sorting office in Scratch that can recognise handwritten postcodes on envelopes.
Objective	<ul> <li>Teach a computer to recognise handwriting</li> <li>Learn how computers can be trained to recognise handwriting</li> <li>Learn how "optical character recognition" is used to automate tasks like recognising postcodes on letters</li> </ul>
Difficulty level	Beginner
Time estimate	1 hour
Summary	Students will draw letters on the screen using an on-screen canvas. This will train a machine learning model to recognise some handwriting. They will use this in Scratch to make a project that can automatically sort letters based on the postcodes they write on them.
Topics	optical character recognition, handwriting recognition, image classification, supervised learning
Setup Setup	
Each student will need:	
Print-outs	Project worksheet (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> )
Files	mailman-max.sbx (download from <a href="https://machinelearningforkids.co.uk/worksheets">https://machinelearningforkids.co.uk/worksheets</a> )
Access	Username and password for machinelearningforkids.co.uk
Class account will need:	
API keys	Watson Visual Recognition 1 custom model per student
	One "Lite" API key is free but can only be used to create 1 custom model One "Standard" API key can be used to create to create multiple custom models  more detail at: <a href="https://github.com/dalelane/ml-for-kids/raw/master/doc/machinelearningforkids-apikeys.pdf">https://github.com/dalelane/ml-for-kids/raw/master/doc/machinelearningforkids-apikeys.pdf</a>
Help	
Potential issues	<ul> <li>Some children may struggle with the coordination needed to write letters on the screen by dragging the mouse pointer on the canvas. Reassure them that it doesn't need to be perfect, and that training the computer to recognise messy handwriting with examples of messy handwriting is fine!</li> </ul>
